Summary

I’m a fourth-year Systems Engineering student with a growing focus on cloud computing, software development, and AWS architecture. I enjoy transforming ideas into practical, scalable solutions while continuously strengthening my skills in React, backend development, databases, Linux, and cloud technologies.I’m currently developing my personal portfolio, raulalvarez.dev, using React and deploying it through AWS. I’m also building a scholarship management system as a university project, using Amazon ECS for container deployment, Amazon RDS for database management, Amazon SES for email communication, and other AWS services.My previous experience in customer service and team management has helped me develop strong leadership, communication, and problem-solving skills. I’m currently seeking an opportunity to begin my professional career in technology, contribute to real-world projects, and continue growing as a cloud and software engineer.
